- workplace mobile devices

• A Little Bit More About Our Product

Why Podloc? Podloc solves common problems with rugged mobile devices in the workplace:

Lost or missing devices reduced. Around 12-15% of workplace mobile devices are lost, or go missing each year on average, with each one costing anything between £1000 and £1500.

Easy asset management of devices with our Podloc Dashboard (overleaf) giving real-time information, at-a-glance

Self-service - device issue, charging, securing, tracing, and return is automatic and staff can serve themselves, saving time, costs, wasted motion, and increasing staff morale

Cost effective - Podloc is significantly more competitively priced than its nearest counterpart, leading to superfast ROI

Work-ready devices - charged, easy to find, and ready for the next shift - reducing wasted staff time, eliminating queues for charged devices, and reducing management time resolving issues, such as finding missing or charged devices

Secure - Podloc's strong build, its two-factor authentication option, and its several credentials authentication methods mean tighter security for devices and fewer thefts. Traceability identifies staff who fail to return devices on time

Small footprint - Podloc has one of the smallest footprints on the market for products of this type

PODLOC by Falcona Solutions. A unique all-in-one neat solution for storing, securing, tracing, and charging your mobile devices, all in one place
